

## Rapid Testing Solutions for the Dairy Industry

Within the dairy industry, regardless of product type, testing of raw ingredients and final products is of significant importance, both for regulatory and quality purposes. Diagnostic solutions for food pathogens, aflatoxins, allergens or veterinary drug residues doesn't need to be expensive or time consuming. Testing options include both in-house solutions or tests that can be carried out on site to reduce both time to results and costs.

### Broad range of test kits for the dairy industry

Gold Standard Diagnostics is a fast-growing provider of diagnostic technologies in the fields of food, feed and environmental testing. We offer a broad range of product test kits to ensure food safety throughout the dairy industry value stream with a choice of testing methods including ELISA kits, lateral flow tests and PCR kits.

### Dairy industry value chain and applicable Gold Standard Diagnostics testing kits

#### Animal Health

- Veterinary Drug Residues
- Animal Health diagnostics

#### Ingredients, Feed & Milk

- Mycotoxins

#### Production & Processing

- Allergens
- Pathogens

#### Distribution & consumption

- Allergens
- Pathogens

## Microbiology

Milk and products derived from milk can be important sources of foodborne pathogens. *Listeria* and *Salmonella* bacteria can survive and thrive in post-pasteurization processing environments leading to the recontamination of dairy products and presenting a potential risk to the consumer.

Our **PCR and ELISA kits** enable a reliable and fast detection of *Listeria* and *Salmonella* species in dairy products.

The **Path-Chek rapid tests** are the optimal solution for the detection of a range of bacteria (*Salmonella*, *Listeria* and Coliforms) on work surfaces and in the processing environment.

## Animal health and feed

Contaminated feed may cause the presence of aflatoxin M1 in cow milk. Due to its toxicity, the level of aflatoxin M1 in milk products is strictly regulated. The screening of milk and dairy products for drug residues is mandatory as well, due to the threat it represents to human health.

Regular serological monitoring of livestock is essential to identify and to manage infectious diseases as such outbreaks can have very serious consequences.

Our diagnostic kits provide rapid, precise and reliable solutions for:

- **Aflatoxin M1 detection:** due to its high sensitivity, selectivity, accuracy and precision, our quantitative immunoassay **I'screen AFLA M1 milk** has been granted AOAC Research Institute Performance Tested Methods<sup>SM</sup> status (AOAC Certificate No. 072002) for the analysis of aflatoxin M1 in raw bovine whole milk, skimmed milk and powdered milk.
- **Drug residues screening:** ELISA kits for a wide range of antimicrobials, beta-agonists, steroids and corticosteroids
- **Veterinary diagnostics:** ELISA, LFD and PCR kits for viral, bacterial and parasitic pathologies of ruminants

## Allergens

Reliable detection of the presence of potential allergens caused by cross-contaminations is often needed in dairy production and processing facilities. Gold Standard Diagnostics offers a **full range of food allergen ELISA and lateral flow test kits** which provide accurate and fast results and are available for all key allergens including gluten, soy, peanut, tree nuts, egg, fish, milk, casein, sesame, beta-lactoglobulin and more.

## Automation Solutions

We offer a broad menu of innovative, fully-automated, user friendly and compact instruments.

### The BOLT™

#### 1-plate ELISA Analyzer

- Intuitive user interface
- Space saving device
- High precision syringes
- Validated for multiple mycotoxins, allergens and VDR ELISAs

### RapidScan ST5-W

#### Lateral Flow Assay Reader

- Portable and highly flexible
- Easy to use and accurate
- Qualitative to semi-quantitative test results
- Validated for a wide range of lateral flow tests
